

Phase 1 – Core Agile Project Management & System Fixes (MVP)

Goal

Make the platform fully usable for software teams to manage projects, tasks, bugs, and sprints with **flexible and scalable issue management**.

1. Project Creation & Workflow Configuration

Scope:

- Project creation for multiple teams, departments, or products
- Project categories for better organization
- Configurable issue workflows (status lifecycle)
- Ability to assign workflows to projects
- Reusable workflows across multiple projects

Deliverable:

Administrators can configure projects and define reusable lifecycle workflows.

2. Dynamic Issue Management System (Enhanced)

Scope:

A. Custom Issue Types

- Admin can create and manage issue types such as:
 - Bug, Task, User Story, Epic, Subtask
 - Custom types (e.g., Improvement, Support Ticket)
 - Each issue type includes:
 - Name, description
 - Color / visual identifier (optional)
-

B. Custom Fields per Issue Type

- Admin can create custom fields and assign them to issue types

Supported field types:

- Text
 - Long text
 - Number
 - Dropdown / Select
 - Multi-select
 - Date / DateTime
 - User selector
 - Checkbox
 - File upload
-

C. Field Configuration

- Required / Optional fields
 - Default values
 - Basic validation rules
 - Field ordering
-

D. Dynamic Issue Form

- Issue creation/edit form changes dynamically based on selected issue type
 - No hardcoded structure
-

E. Standard Issue Attributes

- Priority
 - Assignee
 - Due date
 - Labels / tags
-

Deliverable:

A fully flexible issue management system with **custom issue types, dynamic fields, and configurable forms.**

3. Task Assignment & Workflow Status Tracking

Scope:

- Assign issues to team members
- Configurable workflow status lifecycle

Example:

Backlog → Open → In Progress → Dev Done → QA → In QA → Done

- Customizable Kanban / Scrum boards
- Board columns mapped to workflow statuses

Deliverable:

Visual boards for tracking task progress and team activity.

4. Bug Tracking Lifecycle

Scope:

- Create and manage bugs as a dedicated issue type
- Link bugs to:
 - Stories
 - Tasks
 - Epics
 - Sprints
- Bug lifecycle tracking

- Attachments:
 - Screenshots
 - Logs
 - Files

Deliverable:

Complete bug tracking and resolution workflow.

5. Agile Structure (Epics & User Stories)

Scope:

- Create Epics
- Create User Stories
- Link stories to Epics
- Break down into tasks and subtasks

Deliverable:

Structured Agile hierarchy (Epic → Story → Task).

6. Sprint Planning & Backlog Management

Scope:

- Product backlog management

- Sprint creation and planning
- Assign issues to sprints
- Define sprint goals
- Track sprint progress

Deliverable:

Fully functional sprint planning and backlog system.

7. Time Tracking & Work Logs

Scope:

- Log time on issues
- Add estimated effort
- Maintain user work logs
- Report: Estimated vs Actual time

Deliverable:

Basic effort tracking and productivity monitoring.

8. Core Reporting & Dashboard

Scope:

- Project status dashboard

- Issue status reports
- Bug tracking reports
- Team productivity overview

Deliverable:

Basic reporting and visual insights for project monitoring.

9. Permissions & Roles

Scope:

- Role definitions:
 - Admin
 - Developer
 - Tester
 - Viewer
- Role-based access control for:
 - Projects
 - Issues
 - Dashboards

Deliverable:

Secure and structured access control system.

10. System Bug Fixes & Stability Improvements

Scope:

- Fix inaccurate timer tracking issue
- Resolve chat module “No Internet Access” issue
- Fix task creation without page refresh
- Fix “Project ID required” activation error
- Fix user assignment issue during task creation

Deliverable:

Improved system stability and usability

11. Advanced Dashboards & Reports

Enhanced project analytics.

Scope:

- Custom dashboards
- Sprint analytics
- Issue distribution charts
- Burndown charts
- Team performance metrics

Deliverable:
Advanced project reporting.

12. Notifications & Alerts System

Improve communication.

Scope:

- Email notifications
- In-app notifications
- Alerts on:
 - Issue updates
 - Comments
 - Mentions
 - Assignments
 - Due dates

Improvement:

- Configurable notification settings.
-

13. Collaboration Enhancements

Improve communication inside issues.

Scope:

- Comments
- Attachments
- User mentions
- Hyperlinks
- Worklog history
- Ticket history

Deliverable:

Improved team collaboration.

14. Advanced Search & Filters

Improve issue discovery.

Scope:

- Custom filters
- Save filters
- Apply filters on boards and reports

Deliverable:

Efficient issue searching.

15. Audit Logs & Activity Tracking

Compliance and transparency.

Scope:

- Track issue status changes
- Track assignee updates
- Administrative logs
- Comment history

Deliverable:

Complete audit trail.

16. Time Logging Compliance Automation

Automation for effort tracking. All the email rules are sent as a separate document.

Scope:

- Email reminders if time not logged
- Configurable reminder intervals:
 - Daily
 - Weekly

Deliverable:

Better time tracking discipline.

Phase 2 – Advanced Automation, Reporting & Integrations

Goal: Improve automation, insights, and enterprise capabilities.

1. Release Management

Track releases and versions.

Scope:

- Create releases
- Assign issues to releases
- Release progress tracking

Deliverable:

Better product release management.

2. External Integrations

Support integration with other tools.

Scope:

- Webhooks
- APIs
- Integration with:
 - CI/CD tools

- Git repositories
- Monitoring systems

Deliverable:
Extensible platform.

3. Time Logging Compliance Automation

Automation for effort tracking.

Scope:

- Mandatory time logging rules
